

Eversafe Security Solutions™

Security for the Real World™

EVERSAFE SECURITY SOLUTIONS™ is committed to security.

Defense in depth is the arrangement of defensive positions and products to effectively deter and prevent, or delay and defeat, any forceful attack. This strategy minimizes liability, damage, and loss while maximizing the protection of people and assets.

EVERSAFE is a dynamic, solutions driven physical security company that provides layers of architectural products to protect people. With a talented team experienced in design, investigations, intelligence, bomb threat and blast mitigation, customer service, and installation, Eversafe strives to help defend against threats great and small.

EVERSAFE has developed a portfolio of unique physical security products to address the wide variety of threats developing in our modern world. While terrorism, hate, and acts such as home invasions and burglary are nothing new, the ever increasing frequency and sophistication of these events is alarming. The days of retroactive security or no security at all are long past.

PROTECT AGAINST

- Forced Entry
- Bomb Blast
- Firearms

EVERSAFE Products - Real Security

EVERSAFE brings the next generation of security and protection. True security begins outside. EVERSAFE products create a barrier to keep crime outside and peace of mind inside.

Glass Laminates - Laminates help secure glass, the most dangerous and vulnerable material on any structure.

BallisticBoard® - Ultra-thin and ultra-light, this unique bullet resistant material has the flexibility and capability to meet custom ballistic threat applications.

Security Screens - Security Screens are a revolution in security. High-tensile, custom built woven stainless steel mesh screens create a nearly impenetrable barrier for windows, doors, fencing, fire barriers, and more.

Smoke Security - Smoke security machines rapidly disperse high density fog, limiting visibility in the event of a security breach.
